

Recommendations

Agent Homepage

1. Keep News and Webinars on homepage, but reduce their prominence relative to other more valuable content and links.
2. Feature a My Favorites component on the homepage to supplement the nav item. Consider a complimentary component for most-visited/recently-visited links using site traffic cookies at the user level.
3. Design the default home page as if the client were looking at it while the agent logs in. Anything that increases confidence in the agent and client should be considered.
4. Begin concepting with the mobile experience top of mind, or just start concepting mobile experiences first.
5. Clarify and simplify report names.
6. Consider and explore how much personalization and agent-customization is feasible for MVP.

Navigation Menu

1. Launch with experience close to Concept A to minimize confusion from current state, and (re)test a goal-based approach for MyWFG 2.0.
2. Alphabetize sub menus for scannability.
3. Proceed to usability testing with "My Favorites" listed first in menu as replacement for Toolbox. Preset most visited pages, tools, and reports for MVP launch.
4. Test the ability to add / manage Favorites at the navigation level for desktop first, then mobile if feasible.
